Brake Strobe / Flash Module

Brake Light Module for LED and incandescent brake lights

When you apply your brakes, it causes your brake light to automatically emit a visual alerting signal. This module has 4 different modes of operation:

- 3 Flashes-Solid
- 3 Flashes-Solid-Repeat
- 3 Strobes-Solid-Repeat
- 3 Strobes-Solid

Want to Get Noticed, Want to Get Really Noticed!!!

LEDs can turn on and off MUCH faster than stock bulbs; take full advantage of this with the LED Brake

Strobe. The module has 4 different modes of operation. In Strobe mode this module can turn your LED Brake Light on and off approximately 10 times per second!
